RFEYE NODE 100-18 LW

ADVANCED LIGHTWEIGHT RF SENSOR FOR AUTONOMOUS SYSTEM INTEGRATION

The RFeye Node 100-18 LW offers the same high performance and real-time spectrum operations as our standard RFeye Node 100-18 sensor, but in a smaller, lightweight form well suited for all types of autonomous systems and operations needs.

Developed to integrate as a payload into fixed wing ISR autonomous aerial vehicles, the RFeye Node 100-18 LW (lightweight) is an innovative RF sensor that operates up to 18 GHz. It is a complete spectrum monitoring and geolocation system, can record high-fidelity I/Q data, and is designed to be both a standalone RF sensor and for use in distributed networks. This sensor has been completely redesigned for enhanced SWaP and easy integration.

Weighing less than 2kg, the sensor extends flight time by reducing weight. Three RF ports support antennas for different frequency bands and all four GNSS satellite constellations. Co-engineering, interference, and filter settings knowledge and support is available for integrators.

An uprated GNSS chipset supports the L1, L2, and L5 bands (LW RF sensor only). The RFeye Node 100-18 LW offers outstanding phase noise, noise figure, channel re-tune time, and spurious free dynamic range parameters, superior to other RF sensors in its class.

AT A GLANCE:

- Modified aluminium case and heatsink
- Less than 2kg
- Supports RF information superiority: air-to-air and air-to-ground
- Signal detection, monitoring, and geolocation (TDoA, 3D TDoA)
- Non-invasive to host platform
- Cost effective solution for fast and wide area deployment

An easily deployable capability extender for air, maritime and land operations. With its compact and lightweight form factor, the RFeye Node 100-18 LW is an excellent RF sensor for wide area surveillance, border security monitoring, communications intelligence, and RF (I/Q) data collection.
